PLUG IN MAKES THE IMPOSSIBLEPOSSIBLE

Established in 1999, Plug In is considered today as a reference in matter of development and manufacturing of original and reliable vacuum feedthrough solutions. Since its foundation, our R&D is using the most efficient 3D CAD software. With several patents, a proved production quality and a high service oriented support, Plug In is widely recognized for its capability to solve nearly all customers needs.

Experienced by the major users of the International research laboratories and the space industry, the Plug In vacuum feedthroughs remain unbeaten in terms of design, innovation and reliability.

We are committed to developp hermetic feedthroughs that reach the world advanced level and expand the application of these products in the vacuum market .

PLUG IN will never stop its innovations , based on the epoxy compound sealing , to always better fit your needs and even exceed them . We insure our customers are getting convenient , fast , reliable and considerate service .

We are proud of the trust of our customers , many of them for almost 20 years

Standard outgassing report

Feedthrough sealed with ESA / NASA qualified epoxy resin

Feedthrough Leak rate

$$\leq 1.10^{-8} \text{ mbar l/s}^{-1}$$

$$\leq 1.10^{-8} \text{ atm cc/s}^{-1}$$

$$\leq 7,5.10^{-9} \text{ Torr l/s}^{-1}$$

$$\leq 1.10^{-9} \text{ Pa.m}^3/\text{s}^{-1}$$

Specific outgassing rate at 1 h

Mounting process

The products of the ERVAC range are totally removable and reversible.

- 1 - Dismount the 2 screws on the connector located at the vacuum side
- 2 - Properly clean the mounting flange with iso-propyl alcohol
- 3 - Properly clean the flat viton gasket with iso-propyl alcohol
- 4 - Place the flat Viton gasket in the bottom of the machined window (Air side)
- 5 - Place the ERVAC against the flat viton gasket (Air side)
- 6 - Tighten the 2 screws on the vacuum side by respecting the tightening torque (see below)

All surfaces should be cleaned before mounting. After first vacuum drop down, screws may be tightened again.

Recommended surface roughness < Ra 0,8 - Tightening torque : 1,2 N.m

Modules may be delivered as spare parts or fully assembled and tested on flange.

Leakrate : < 1.10-8 mbar.l/s - Temperature Range : -40°C / +80°C

Plug in
Feed-Throughs®

ERVAC General informations

Services and support

Although our standard assortment is broad and miscellaneous, there are customer requirements which need an individual and specific design. Thanks to capabilities and years of experience, Plug In Is the ideal partner when customized solutions are demanded.

3D files

For the exchange of CAD models between various CAD systems, Plug in is providing the customers with 3D files in IGS or STEP data format.

Material comparison and outgassing rates

Approximate outgassing rates to use for choosing vacuum materials or calculating gas loads (All rates are for 1 hour of pumping)	
Vacuum material	Outgassing rate (torr liter/sec/cm ²)
Stainless stell	7,E-09
Aluminum	6,E-09
Mild steel	4,E-06
Brass	5,E-06
High density ceramic	3,E-09
Pyrex	8,E-09

ERVAC D-SUB Normal density signals and thermocouples - Technical data

Technical Data

Mechanical Data

Mating force per signal contact : 3,4 N
 Unmating force per signal contact : 0,2 N

Electrical Data

Current rating at room temperature : 5 A
 Test voltage between 2 contacts / shell and contact : 1200 V / 1 min.

Meets transition resistance requirements per contact pair in line with DIN 41652

Contacts : 5 mΩ
 Insulation resistance between contacts : 5000 MΩ
 Volume resistivity : 1016 Ω cm
 Dielectric strength : 50 kV / mm

Materials and Platings

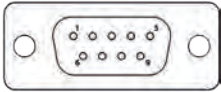

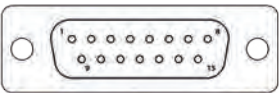

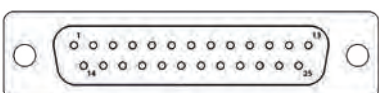

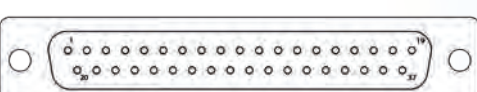

Shell (upon request) : Steel (brass)
 Shell plating (upon request) : Yellow chromate over zinc plating (hard gold)

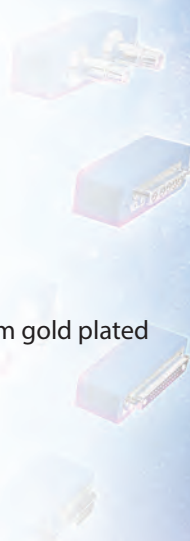

Contact material : Signal : copper alloy 1,3 μm gold plated
 Tc K type : NiCr / NiAl
 Tc T type : Cu / CuNi
 Tc E type : NiCr / CuNi
 Tc J type : Fe / CuNi
 Tc N type : NiCrSi / NiSi

All D-sub components fully meet the requirements of :

MIL-PRF-24308 - M24308/11-1
 M24308/10-1 - M39029/64-369
 M39029/63-368

ERVAC D-SUB Normal density Thermocouple Crimp Contacts

Our screw machined thermocouple contacts are made by the highest skilled swiss screw machine workshops out of the highest selected solid materials. All our screw machined socket contacts have a stainless steel sleeve for an improved reliability.

D-Subminiature contacts are manufactured according to military specification : MIL-DTL-39029

B1423	20	CH	M
Contact series prefix			
Solid machined male contact = B1423			
Solid machined female contact = B2973			
Contact sizes			
For wire sizes AWG (mm²) 20/22/24 (0,5/0,3/0,25) = 20			
For wire sizes AWG (mm²) 26/28/30 (0,12/0,08/0,05) = 26			
Contact material			
Alumel = AL			
Chromel = CH			
Constantan = CO			
Copper = CU			
Iron = FE			
Nicrosil = NP			
Nisil = NN			
Contact gender			
Male = M			
Female = F			

Thermocouple types :

Type K : Chromel (+) - Alumel (-)

Type T : Copper (+) - Constantan (-)

Type E : Chromel (+) - Constantan (-)

Type N : Nicrosil (+) - Nisil (-)

Type J : Iron (+) - Constantan (-)

Connectors mating Kit and accessories Signal and Thermocouple

*P*lug In is offering a complete range of D-Subminiature connectors for test and ground applications. They are available as a standard with zinc plated steel shells or, upon request, with hard gold plated brass shells (non magnetic applications).

All our D-SUB connectors are fully compatible and mateable with all D-SUB connectors conforming to :

- ESA/SCC 3401 - GSFC 311-P4
- MIL-DTL-24308 - IEC 807-2

These connectors are suitable for vacuum applications down to 1.10^{-7} mbar end pressure.

Each connector kit includes :

- 1 male connector + 1 metal hood
- 1 female connector + 1 metal hood
- Male and female crimp contacts

Connector kits are delivered on demand and available for all D-SUB type including standard density (thermocouple and signal), high density (signal) and mixed layouts (power, coaxial, high voltage).

In addition to his full line of hermetically sealed feedthroughs, Plug In also offers an «all in one» solution with fully assembled electrical or thermocouple harnesses to be used under atmospherical or vacuum pressure conditions.

Metal hoods with straight cable outlet

Angled cable outlet hoods are available upon request

Plug In - know how Engineering

The word quality comes from Latin and literally means "What state". The notion of quality is by definition subjective as it may be poor or good. If we stick to the common definition, the quality would come from a set of decision and action to satisfy a customer by providing products or services that meet his expectations.

At Plug In, we prefer by far the notion of artisanal identity of our products. Indeed, this approach integrates the concept of Art, a word which, derived from the Latin "Artis" means, among other meaning, skill, mastery of the trade and technical knowledge, so many values that should allow us to go beyond expectations of our customers. This is the foundation of our production process. This is what led us to search for reliable partners, recognized experts in their respective fields. This imposes above all an uncompromising rigor throughout the manufacturing process, the final sanction being the perfect validity of the product or its destruction.

Since the very first days Plug In has always used one of the best 3D CAD software available on the market, called SOLIDWORKS. Our Engineering team is working with the latest high speed work stations, replaced every 3 years so we are, every day, using the best up-to-date design tool. It offers a fast exchange of datas and drawings with our customers and gives them the real aspect of their future products.

Our manufacturing drawings to manufacture our spare components are directly released to our sub contracting partners, most of them local companies located in the Aerospace Valley around Toulouse in the South of France. That concept insure a fast and reliable programming of their numerical controlled machines as well as the very best accuracy.

Thanks to our small size, all our multi-skilled staff (design, sales, production, purchasing) is working closely to insure the best answer to your specific needs, even the most complex one and even for one single item.

We have an overall cumulated experience of more than 60 years in the design and manufacturing of connectors and feedthroughs so we are used to be challenged by our customers. Do not hesitate to do so.

Impossible is often made possible by the Plug In team !

Hyperfrequencies

According to the most commonly accepted definition*, the microwave represents electromagnetic waves whose wavelength are of the order of a centimeter, and which are used in particular in radar technology and in radio transmission. Radar has been a major contributor to microwave development: studies conducted during and after the Second World War at the Massachusetts Institute of Technology led to the development of literature on microwave foundation, technology, and measurement techniques . Subsequently, new areas of use have emerged, for example in terrestrial radio-relay telecommunications, in military countermeasures systems and, of course in Space.

Within these 20 years of existence, Plug In has developed new versions based on the ERVAC® feedthrough design mounted with connector types going from 1,5 GHz (D-Sub Mixed layout) up to 65 GHz (PC 1.85).

*(source: Encyclopaedia Universalis)

Coaxial - general data

The demands placed on space communications systems are continuously increasing while the challenge is to maintain their extreme reliability and versatility, in order to accommodate the long system lifetimes of all missions. If it is a sector in space technologies that is developing extremely rapidly, it is certainly this one. In the same way as for our entire range, Plug In offers you the widest choice of hermetic feed-throughs covering the frequency ranges currently used in missions and which have to undergo long time thermalvacuum tests.

In the following pages you will find a detailed description of each type of hermetic feed-through according to the frequency and wavelength range used by your system. The table below shows you the bands, depending on the different technical applications.

Connector Series :

Designation	Frequency range	Wavelength range	Typical uses	
<u>L band</u>	1 to 2 GHz	15 cm to 30 cm	Military telemetry, GPS, mobile phones (GSM), amateur radio	Plug In Products
<u>S band</u>	2 to 4 GHz	7.5 cm to 15 cm	Weather radar, surface ship radar, and some communications satellites (microwave ovens, microwave devices/communications, radio astronomy, mobile phones, wireless LAN, Bluetooth, ZigBee, GPS, amateur radio)	
<u>C band</u>	4 to 8 GHz	3.75 cm to 7.5 cm	Long-distance radio telecommunications	
<u>X band</u>	8 to 12 GHz	25 mm to 37.5 mm	Satellite communications, radar, terrestrial broadband, space communications, amateur radio, molecular rotational spectroscopy	
<u>Ku band</u>	12 to 18 GHz	16.7 mm to 25 mm	Satellite communications, molecular rotational spectroscopy	
<u>K band</u>	18 to 26.5 GHz	11.3 mm to 16.7 mm	Radar, satellite communications, astronomical observations, automotive radar, molecular rotational spectroscopy	
<u>Ka band</u>	26.5 to 40 GHz	5.0 mm to 11.3 mm	Satellite communications, molecular rotational spectroscopy	
<u>Q band</u>	33 to 50 GHz	6.0 mm to 9.0 mm	Satellite communications, terrestrial microwave communications, radio astronomy, automotive radar, molecular rotational spectroscopy	
<u>V band</u>	50 to 75 GHz	4.0 mm to 6.0 mm	Millimeter wave radar research, molecular rotational spectroscopy and other kinds of scientific research	
<u>W band</u>	75 to 110 GHz	2.7 mm to 4.0 mm	Satellite communications, millimeter-wave radar research, military radar targeting and tracking applications, and some non-military applications, automotive radar	Not applicable
<u>F band</u>	90 to 140 GHz	2.1 mm to 3.3 mm	SHF transmissions: Radio astronomy, microwave devices/communications, wireless LAN, most modern radars, communications satellites, satellite television broadcasting, DBS, amateur radio	
<u>D band</u>	110 to 170 GHz	1.8 mm to 2.7 mm	EHF transmissions: Radio astronomy, high-frequency microwave radio relay, microwave remote sensing, amateur radio, directed-energy weapon, millimeter wave scanner

ERVAC PC 1.85 - 65 GHz Technical data

Technical data

PC 1.85 are precision models for use in microwave applications up to 65 GHz. These items features best electrical performances, excellent mechanical stability as well as extreme reliability. They are particularly well suited for semi-rigid microwave cables.

Four DC-65 GHz - 1.85 mm Male / Male plug in one standard ERVAC® module gives you the highest frequency actually available on an hermetic feedthrough.

Connectors

Electrical :

Frequency range DC - 65 GHz
Return Loss > 15 dB

Mechanical :

Body and outer conductors :
- Passivated stainless steel
Inner conductors :
- Gold plated Beryllium copper and Brass

Glass Bead

Electrical :

Frequency range DC - 65 GHz

Mechanical :

Outer and inner conductors :
- Gold plated Fe / Ni / Co alloy (KOVAR)
Insulator : #7070 Glass

Coupling Torque : 90 N-cm (Nominal)

Mating cycles : > 1000

Electrical data	Requirements
Impedance	50 Ω
Frequency range	DC ... 65 GHz
Dielectric withstanding voltage (at sea level)	500 V rms, 50 Hz
Working voltage (at sea level)	150 V rms, 50 Hz
insulation resistance	$\geq 5.10^3$ M Ω
Contact resistance	
- centre contact	≤ 4 m Ω
- outer contact	$< 2,5$ m Ω

Typical Performance

Test configuration

ERVAC PC 2.4 - 50 GHz

Technical data

Technical data

The 2.4 mm connector was developed by HP, Amphenol, and M/A-COM for use to 50 GHz. This design eliminates the fragility of the SMA and 2.92 mm connectors by increasing the outer wall thickness and strengthening the female fingers. It can mate with SMA, 3.5 mm and 2.92 mm with the use of precision adapters.

Electrical		Mechanical	
Frequency	DC~ 50 GHz	Mating Cycle(Durability)	500
Impedance	50 Ω	Recommended Mating Torque	0.9 ~ 1.13 Nm / 8 ~10 lbs
VSWR	1.3 : 1 to 50 GHz	Proof Torque	1.7 Nm / 15 lbs
Insulation Resistance	5000 MΩ	CouplingNut Retention Force	270 N / 27.7 kgf/ 61 lbs
Dielectric WithstandVoltage	1200 VrmsMax	CenterContact Retention Force	4 pound (axial)
Contact Resistance			
Outer Conductor	2mm Ωmax	Environmental	
Inner Conductor	3mm Ωmax	Temperature	-40°Cto + 125°C
InsertionLoss	0.35 dB max (@50 GHz)	Thermal Shock	MIL-STD-202, Method 107, Condition B
RF Leakage	-90 dB	Moisture Resistance	MIL-STD-202, Method 106
Power Handling	70W (@2 GHz)		

ERVAC PC 2.92 - 40 GHz Technical data

Technical data

PC 2.92 are precision models for microwave applications up to 40 GHz. They are intermateable with series SMA and PC 3.5. they have a high mechanical stability and an excellent repeatability

	Jack	
	min.	max.

- launchers	$\leq 1,43$ DC ... 40 GHz

Mechanical data	Requirements
Coupling nut torque	
- recommended	1,30 Nm / 11,47 in. lbs
- proof torque	1,70 Nm / 15,0 in. lbs
Contact captivation	≥ 27 N / 4,9 lbs
Durability (matings)	≥ 500

Material data		
Connector parts	Material	Plating
Bodies, cable connectors	copper beryllium alloy / stainless steel	gold / passivated
Bodies receptacles	stainless steel / copper alloy	passivated / gold
Center contact	copper beryllium alloy	gold
Support beads	PPO (polyphenylene oxide)	

ERVAC SMA - 18 GHz Technical data

Technical data

SMA are precision models for microwave applications up to 18 GHz. . There is a huge variety of applications for SMA types, as in telecom, test and measurement, instruments, avionics, etc.

- Frequency range up to 18 GHz, extended frequency version up to 26.5 GHz
- Excellent return loss
- Intermateable with PC3.5 and PC2.92
- The SMA (Subminiature A) interface dimensions conform to the following standards:

International: IEC 60169-15
Europe: CECC 22110
USA: MIL-C-39012 SMA - Interface MIL-STD 348a/310

Manufacturing examples

ERVAC-D-2BNCF/F-I-C

ERVAC-E-1BNCF/F-I-C

ERVAC SHV - Technical data

Technical data

SHV (Safe High Voltage) connectors provide more secure handling as center contacts are well recessed to prevent shock hazards in unmated condition. All inner contacts are fully captivated and will withstand axial forces of 100 N minimum. When mating a connector pair the outer conductor contact is made prior to the inner conductor contacts. SHV connectors are suitable for all high voltage applications up to 5 kV DC or 3.5 kV rms. These connectors are typically used in nuclear instruments or test and measurement equipment. Voltages are valid for both, the mated and the unmated condition.

ERVAC High voltage Reynolds Technical data

Technical Data

The ERVAC high voltage Reynolds 600 Series® is a complete line of subminiature, coaxial, high voltage connector feedthrough. In production since 2001, these high voltage feedthroughs have proven to be extremely reliable in a variety of both, Aerospace/Defense and high-end commercial applications. The 600 Series is also, possibly, the smallest coaxial, high voltage connector rated for use at 70,000 ft. available on the market.

APPLICABLE DOCUMENTS AND SPECIFICATIONS :

Connector	Teledyne Reynolds Series 600
Altitude/Reduced Pressure Rating	70,000 ft.
Voltage Rating	5 kVDC
Current Rating	1 Amp
Test Voltage	7.5 kVDC at 70,000 ft. (simulated) at ambient temperature
Mating Compatibility	Mates all Series 600 plug assemblies
Insulator Material	Plastic
Mating Torque	4 to 6 in-lbs
Mating Style	Threaded
Body Properties	
Body Material	Brass
Body Finish	Gold Plated
Contact Properties	
Contact Material	BeCu
Contact Finish	Gold
Contact Diameter	0.031 in / 0.79 mm
Gasket	Viton

ERVAC Micro-D - Technical data

Micro-D connectors have significantly superior performance to commercial type connectors of identical pitch. They are ideal choice when the operating conditions are critical, especially for space applications and thermal vacuum testing. The standardisation has been governed by the MIL-C-83513 issue E standard now dictates the design and performances for these connectors.

The Micro-D connector system meets all requirements in terms of robustness and durability. It has low contact resistance, high current capabilities and dielectric strength while being resistant to shocks and vibrations. With 1.27 mm (0.050") contact spacing, Micro-D connectors, half the size of D-sub connectors, represent an excellent solution for saving both space and weight.

- QPL qualified Micro-D connectors in accordance with MIL-DTL-83513 for military applications.
- Standard range of micro-D connectors according to MIL-DTL-83513.
- Qualified space versions ESCC3401/029 EPPL2 (MDSA references).

FEATURES	SPECIFICATION	TEST METHODS

ERVAC SpaceWire - Technical data

SpaceWire technology has grown organically from the needs of on-board processing applications. One of the principal aims of SpaceWire is the support of equipment compatibility and reuse at both the component and subsystem levels. Integration and test of complex on-board systems is also supported by SpaceWire with ground support equipment plugging directly into the on-board data-handling system. Monitoring and testing can be carried out with a seamless interface into the on-board system. SpaceWire is the result of the efforts of many individuals within the European Space Agency, European Space Industry and Academia.

SpaceWire is being widely used on many space missions by: ESA / NASA / JAXA / CNSA

SpaceWire is defined in the European Cooperation for Space Standardization ECSS-E50-12A standard.

Technical Data

ECSS-Q-ST-70-08	Space product assurance — Manual soldering of high reliability electrical connections
ECSS-Q-ST-70-26	Space product assurance — Crimping of high reliability electrical connections
ANSI/TIA/EIA-644	1995 Telecommunications Industry Association, "Electrical Characteristics of Low Voltage Differential Signaling (LVDS) Interface Circuits", March 1996
ESCC 3401/071	Connectors, Electrical, Rectangular, Microminiature, Solder Bucket Contacts with EMI Backshell, based on type MDM

Connectors

The SpaceWire connector has eight signal contacts plus a screen termination contact. A ninepin micro-miniature Dtype is specified as the SpaceWire connector. This type of connector is available qualified for space use.

SpaceWire connector contact identification

The following test report gives a relevant basis to establish a clear comparison of electrical performances between the actual SpaceWire qualified connector couple and the insertion of PLUG IN feed through developed for AIT testing in vacuum chambers. As we can see on the eye patterns, we have a good margin with the mask limits for all the tested pin couples (1&6, 9&5, 2&7, 8&4) for all the tested feed throughs in worst case condition with maximum data rate (400Mb/s) and minimum voltage from emitter (250mV).

Note : Upon request, a 15 pins version is available to offer independent shieldings of each pair.

ERVAC SpaceWire - Technical data

Feedthrough qualification

This technical note is a validation of PLUG-IN feedthrough reference 0614-01, 0614-02, 0614-03 regarding electrical signal transmission dedicated to SpaceWire links.

Time Domain transmission measurements test procedure.

For speed data rate range from 50 to 3200 Mb/s, we can use the ParBERT81250 generator. If we need to generate signal over 3200 Mb/s we can use the N4903A (from 620 Mb/s to 12500 Mb/s) in this case, as the maximum SpaceWire speed is set to 400Mb/s we can use ParBERT81250.

Signal analyser CSA8000B is used to build a Eye Pattern and to measure several parameters like:
- Qfactor, Eye Height, Eye Width, RMS Jitter and Peak to Peak Jitter.

The signal is generated from 2 Ports (DATA+ & DATA-) to inject the signal in differential directly in the cable through the test jig without any balun. The PRBS binary sequence of the signal is set to 231-1 and the differential peak-to-peak voltage is set to 0.5Vpp. (+250mv to -250mv swing)

The minimum guaranteed output level of an LVDS transmitter is ± 250 mV. The required LVDS receiver input is ± 100 mV.

The overall eye pattern from the LVDS transmitter to the LVDS receiver shall be comprised within the mask defined in figure 5.2b when the transmitter mask is conforming to figure 5.2a.

Eye pattern shall be frozen after 1000 acquisitions and the following parameters will be measured on it :

Mask go/no go test

ERVAC Optical fiber - Technical data

Two SMA or FC/PC type Optical Fibers in one standard ERVAC® module. A number of fiber optic links have to go through a panel separating two volumes hermetically insulated (vacuum, liquid, gas, temperature, radiations, etc.). A fiber optic connexion is generally made of two male connectors with a female coupling part. It is this coupling part, with FC/PC, FC/APC or SMA interface, which will be the base of this range of hermetic feedthrough.

A standard coupling part between two connectors is a precision part which allows the alignment of the connectors ferrules. In the hermetic feedthrough this coupling part is made longer and a piece of fiber is glued inside to obtain an hermetic optical path. This fiber is chosen to match the fibers to be connected at each end of the feedthrough.

We offer the widest range of single-mode and multi-mode optical fibers.

Optical aperture :	0.37 or 0.22
For any wavelength :	UV or UV+visible or UV + IR or very large band
Max insertion loss :	< 3 dB @ 850 nm (2 dB for a 600 μ m fiber)

FC/PC F/F

Single-mode :	1 310 or 1 550 nm
Single-mode with low wavelength :	450 , 600 , 630 , 750 , 780 , 820 , 980 or 1 060 nm
Gradient index :	GI 50/125 , GI 62.5/125
Step index :	LCH 125 or 50 (visible + IR)
Max insertion loss :	< 1 dB @1 550 nm with SMF28 type single-mode fiber

SMA M/M

Step index :	from 100 to 1 000 μ m core
Optical aperture :	0.37 or 0.22
For wavelength UV or UV+visible or UV + IR or very large band	UV or UV+visible or UV + IR or very large band
Max insertion loss :	< 3 dB @ 850 nm (1.5 dB @ 850 nm for a 200 μ m fiber)

FC/PC or FC/APC M/M

Single-mode :	1 310 or 1 550 nm
Single-mode with low wavelength :	450 , 600 , 630 , 750 , 780 , 820 , 980 or 1 060 nm
Gradient index :	GI 50/125 , GI 62.5/125
FC/PC Max insertion loss :	< 1 dB @1 550 nm (0.3 dB @ 1 550 nm with SMF28 type single-mode fiber)
FC/APC Max insertion loss :	< 1.5 dB @ 1 550 nm (0.7 db @1 550 nm with SMF28 type single-mode fiber)

FC/PC or FC/APC M/M with polarization maintaining fiber

Single-mode polarization maintaining fiber (PANDA type) :	1 310 or 1 550 nm
Single-mode polarization maintaining fiber (PANDA type) low wavelength :	450 , 600 , 750 , 780 , 820 , 980 or 1 060 nm

Technical Data

Electrical performance

ITEM	TEST CONDITION	REQUIREMENT
Contact resistance	Bulk resistance measured between plug solder tails and receptacle solder tails per ANSI/EIA-364-23	20 mΩ maximum, initial per contact mated pair - 10 mΩ maximum change from initial reading per contact mated pair
Shell resistance	Bulk resistance measured between ground leg on receptacle shield and the plug cable braid. Test current = 100mA - Test voltage = 5 Volts DC open circuit maximum per ANSI/EIA-364-06A-83	50 mΩ maximum, initial - 50 mΩ maximum change from initial reading
Insulation resistance	Test voltage = 500 Volts DC +/- 50V unmated and unmounted per ANSI/EIA 364-21 method C	1 GΩ minimum between adjacent contacts and contact and shell
Dielectric withstanding voltage	Test voltage = 500 Volts DC +/- 50V unmated and unmounted per ANSI/EIA 364-20 method C at barometric pressure of 15 psi	No flashover no sparkover, no excess leakage, no breakdown
Contact current rating	Maximum ambient = 55°C - Maximum temperature change = 85°C per ANSI/EIA-364-70, TP-70	3.0 A maximum
Applied voltage rating		40 Volts AC (rms) continuous maximum on any signal pin with respect to the shield
Electrostatic discharge	Test unmated from 1 kV to 8 kV in 1 kV steps using 8 mm ball prob per IEC 801-5 - Contact discharge to shell - Air discharge perpendicular to shell - Air discharge at angle to shell	No evidence of discharge to contacts at 8kV. Discharge to the shell is acceptable.
Signals Time Domain Impedance (T.M.D.S.)	Risetime = 330 pS (10%-90%) - S:G ratio per DVI pin designation - Differential measurement specimen environment impedance = 100 Ω - Differential source-side receptacle connector mounted on a controlled impedance P.C.B. fixture per ANSI/EIA-364-108 draft proposal	100 Ω +/- 15%

Gasket : Viton

DVI connector variations are available :

- DVI-I (Dual link)** - DVI-I (Integrated), it combines both digital and analog in the same connector
- DVI-I (Single link)**
- DVI-A** - DVI-A (Analog), it supports analog only.
- DVI-D (Dual link)** - DVI-D (Digital), it supports digital signals only
- DVI-D (Single link)**

Technical Data

Mechanical performance

ITEM	TEST CONDITION	REQUIREMENT
Mating force	One pair per ANSI/EIA-364-13 - Insertion speed: 1 inch (25,4mm) per minute	10,0 lbf (4,5 kgf) maximum
Unmating force	Mated pair per ANSI/EIA-364-13 - Withdraw speed: 1 inch (25,4mm) per minute	2,2 lbf (1,0 kgf) minimum - 8,8 lbf (4,0 kgf) maximum
Receptacle contact retention	Individual contact	1,0 lbf (0,45 kgf) minimum
Receptacle key retention	individual key	2,0 lbf (0,90 kgf) minimum
Plug contact retention	Push out from mating face - Individual contact	10 lbf (4,5 kgf) minimum
Plug key retention	Push out from mating face - individual key	10 lbf (4,5 kgf) minimum
Durability	Automatic cycling : 100 cycles per ANSI/EIA-364-09 at 100 +/- 50 cycles per hour	Contact resistance per EIA-364-23 : 10 mΩ maximum change from initial per contact pair - All samples to be mated - Shell resistance : 50 mΩ maximum (change from initial reading)
Vibration	15 minutes / axis per ANSI/EIA-364-28 method 5A	No discontinuities at 1 μs or longer 'each contact) when continuity is tested per EIA-364-46
Shock (mechanical)	Per ANSI/EIA-364-27, condition A (specified pulse)	No discontinuities at 1 μs or longer 'each contact) when continuity is tested per EIA-364-46
Cable pullout force	Tes for cable strain relief & termination integrity. Cable subjected to 25,0 lbf (11,3 kgf) static load for one minute while monitoring continuity. Isolate plug & receptacle interface from load.	No discontinuities greater than 1 μs.
Board insertion force		10 lbf (4,5 kgf) maximum
Cable flex	100 cycles in each of 2 planes - Dimension X = 3,7x cable diameter per ANSI/EIA-364-41 condition I	No discontinuities greater than 1 μs allowed during flexing on contacts or shields per EIA-364-46 - Dielectric withstanding voltage and insulation resistance tested per requirements of section 5.1
Normal force	For reference only	.050" pitch terminals : 75 grams typical .075" pitch terminals : 90 grams typical Ground plane : 100 grams typical
Thread torque	Mounted to panel; Test to failure; Tighten jackposts with torque gage until threads are stripped and jackpost turns freely	5,0 lbf in (5,76 kgf cm) minimum

Additional general specifications are:

Plug:

- LFH (Low Force Helix) style contacts
- fully shielded RFI/EMI can
- grounding detents on mating shell
- solder tails for cable termination
- positive retention jackscrew: thread 4-40 UNC-2A

Receptacle:

- high cycle, dual beam, LFH shrouded contacts
- polarization achieved by a "D" shaped housing/shield
- single piece shield with integral ground leg
- shield protrudes for ESD considerations
- solder tails for thru hole board mount
- plastic retention pegs
- jackposts: # 4-40 UNC-2A&B threads.

ERVAC HDMI Technical data

HDMI[®]
HIGH-DEFINITION MULTIMEDIA INTERFACE

Technical Data

HDMI (High-Definition Multimedia Interface) is a proprietary audio/video interface for transmitting uncompressed video data and compressed or uncompressed digital audio data from an HDMI-compliant source device, such as a display controller, to a compatible computer monitor, video projector, digital television, or digital audio device. With 18Gb/s of bandwidth, HDMI can accommodate the future enhancements and requirements of audio/video equipment.

ELECTRICAL PERFORMANCE :		MECHANICAL PERFORMANCE :	
Low Level Contact Resistance:	Initial 10mΩ max. Per EIA 364-23	Durability Type C:	5,000 cycles at 100 ± 50 cycles per hour. Per EIA 364-09

Shell :	Stainless Steel or Copper Alloy

ISO K DN160 Flange equipped with four ERVAC-D-2HDMI

ERVAC USB A - 2.0 Technical data

Universal Serial Bus (USB) is an industry standard that defines the cables, connectors and communications protocols used in a bus for connection, communication, and power supply between computers and electronic devices. The USB bus was really born from the alliance in 1994 of seven industrial partners (Compaq, DEC, IBM, Intel, Microsoft, NEC and Northern Telecom) who joined together in order to create the USB standard. The USB bus was originally designed for the ease of data transfer especially defining a "universal" and "Plug & Play" connectivity, usable for a mouse as well as a modem or monitor. Designed also to meet the need for integration between the PC and the mobile phone world and finally to meet the need for multiple extensions outside the PC, indeed we can, in theory connect up to 127 devices.

Technical Data

Applicable documents and specifications :

EIA-364. / MIL-STD-202. / MIL-STD-1344A. / USB 2.0 SPECIFICATIONS

Electrical characteristics :

Description	Test condition	Requirement
Low Level Contact Resistance	EIA 364-23 Mate connectors: apply a maximum voltage of 20 mV and a current of 100 mA	30 milliohms MAXIMUM
Insulation Resistance	EIA 364-21 Unmate & unmount connectors: apply a voltage of 500 VDC between adjacent terminals and between terminals to ground.	1000 Megohms MINIMUM
Dielectric Withstanding Voltage	EIA 364-20 Unmate connectors: apply a voltage of 500 volts VAC for 1 minute between adjacent terminals and between terminals to ground.	No breakdown; current leakage < 0.5 mA
Contact Capacitance	EIA-364-30 Test between adjacent circuits of unmated connector at 1 KHz. The object of this test is to detail a standard method to determine the capacitance between conductive elements of a USB connector.	2 pF Maximum per Contact
Contact Current Rating	EIA 364-70 Method B When measured at an ambient temperature of 25 . With Power applied to the contacts, the T shall not exceed + applied to the contacts, the 30 at any point in the USB connector under test The object of this test procedure is to detail a standard method to assess the current caring capacity of mated USB connector contacts.	1.5A at 250Vac minimum & Temperature rise: +30°C MAXIMUM

ERVAC USB A - 3.0 Technical data

Mechanical characteristics

Parameter	Procedure	Requirement
Mating force	EIA 364-13 Measure the force necessary to mate the connector assemblies at a max rate of 12.5 mm per minute.	N 35max
Unmating force	EIA 364-13 Measure the force necessary to unmate the connector assemblies at a max rate of 12.5 mm per minute.	15 N min
Durability	EIA 364-09 25 cycles. Done at a max rate of 200 cycles per hour.	No physical damage to any part of the connector and cable assembly.

USB 3.0, or SuperSpeed USB, is the successor to USB 1.x and 2.0 standards. At plug In, we have synthesized its characteristics in order to present you immediately a hermetic feedthrough compatible with this new standard. The SuperSpeed USB is announced with transfer speeds, 6 to 10 times faster than USB 2.0, it is backward compatible with older standards, synchronizes devices faster when connected, and, importantly, manages much better the energy consumption (standby, start-up, deactivation if necessary). This new standard of the Universal Serial Bus mainly has a significantly improved transfer speed, since we speak in theory of 5 Gbit / s (4.8 Gbit / s or 600 MB / s). For the record, the USB 1.x could communicate in low speed mode at 1.5 Mbit / s and between 12 Mbit / s and 1.5 MB / s in fast mode (Full Speed). USB 2.0 (High Speed) reaches 480 Mbit / s (60 MB / s).

**Plug In's new SuperSpeed mode
USB A 3.0 feedthrough provides a
theoretical data signaling rate of
5.0 Gbit/s - Leak rate of $< 1 \times 10^{-8}$ mbar.l/s**

**The connections on the atmospheric side and vacuum side
should not exceed a maximum cable length of 5 meters.**

ERVAC Firewire IEEE 1394 Technical data

*F*ireWire is the trade name given by Apple to a multiplexed serial interface, also known as the IEEE 1394 standard and also known as the i.LINK interface, a commercial name used by Sony. It is a computer bus conveying both data and control signals of the different devices it connects. As a real Plug and Play, it can be used to connect all kinds of bandwidth-hungry devices that require stable data throughput, especially for hard drives and digital camcorders. It allows you to power a device, as well as connect 63 devices per bus, ensuring their connection / disconnection while the system is running (known as "Hot plug"). Up to 1024 buses can be connected via gateways.

Technical Data

This product conforms to IEEE 1394. With only one type of connector, the Firewire ERVAC can be connected to several digital peripheral equipment. IEEE 1394 connector series capable of accommodating data rates up to 400Mbps.

Applicable documents and specifications :

EIA-364. Electrical Connector/Socket Test Procedures
IEC Test Methods)
Qualification Test Report (IEEE 1394 External Serial Bus Connector)

Mechanical and electrical characteristics

Voltage	40 Volts AC (RMS)
Current	1.5 Amps, signal application only
Contact resistance	30 milliohms max.
Insulation resistance	100 Megohms min.
Dielectric withstanding voltage	No breakdown; current leakage < 0.5 mA
Contact Current Rating	1.5A at 250Vac minimum
Connector Mate force	35 N maximum
Connector Unmate force	10 N minimum

Material and Finish

Housing	Thermoplastic, UL94V-0, black
Contact	Copper alloy, palladium nickel, gold and tin plated, nickel underplated
Gasket	Viton

ERVAC RJ45 Ethernet Technical data

*R*J45 is the common but inaccurate name for the 8P8C modular connector (8 positions and 8 electrical contacts) commonly used for Ethernet connections, and for telephone connectors. The "RJ" references come from the name «registered jack» which is a part of the Code of Federal Regulations in the United States for telephone networks, and which in fact means not connectors, but the official standard pinouts.

The most common use of the RJ45 connector is Ethernet cabling using four pins (two pairs) or eight pins (four pairs). It is also used as desk phone connectors and for computer network applications such as ISDN and T1.

But, more and more, it is a connection using the eight points of contact that is used to connect the four pairs needed to 1 gigabit per second networks and pre-wire the buildings for all "low current" applications (low power and low voltage) that do not require a lot of separate drivers. Similarly, the 8P8C connector, said RJ45 allows several types of cables, twisted in pairs or not, with or without shielding.

Plug In has, based on this connector interface, designed a rugged versatile ERVAC connector feed-through for Cat. 5e and Cat. 6A, that ensures reliable protection and the convenience of easily mating under the most difficult and harsh environments.

Technical Data

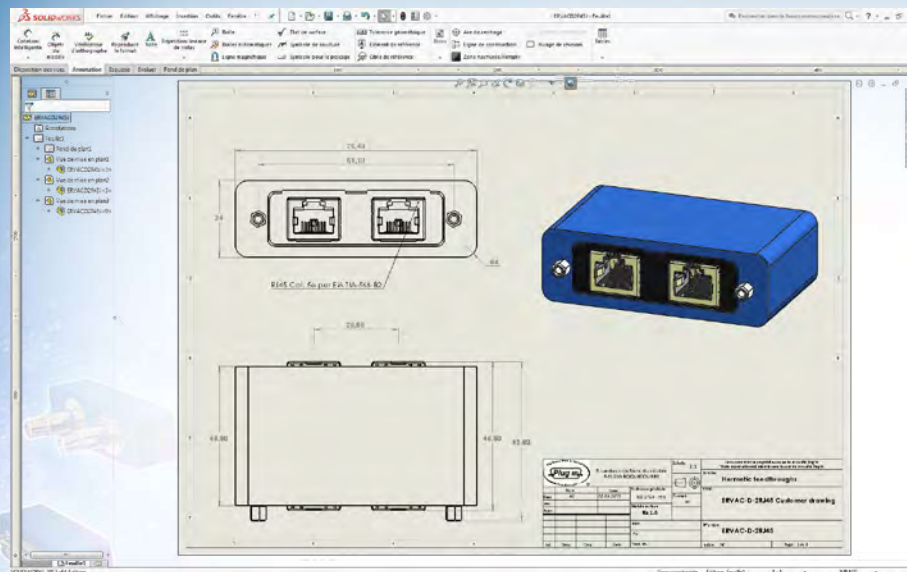

Mechanical and electrical characteristics	
Interface connector	RJ45 Cat. 5e per EIA TIA-568-B2/ RJ45 Cat. 6A per EIA TIA-568-B2 (channel)
Strength of current	1.2 A max. to 25°C
Voltage	100 VDC
Contact resistance	20 mΩ max.
Insulation resistance	500 MΩ
Electric strength contact to contact	1000 VDC 60 sec.
Electric strength contact to metal Housing	1500 VDC 60 sec.
Materials	
RJ45 Socket metal housing	Copper alloy, nickel plated
RJ45 Socket and plug connector plastic housing	PBT (black), flame protection per UL 94-V0
RJ45 Socket and plug contacts	Phosphor bronze, gold plated
RJ45 plug connector metal housing	Copper alloy, nickel plated

ERVAC MIL-STD-1553B Technical data

The digital data bus was designed in the early 1970's to replace analog point-to-point wire bundles between electronic instrumentation. The latest version of the serial local area network (LAN) for military avionics, currently known as MIL-STD-1553B, was issued in 1978. After 35+ years of familiarity and reliable products, the data bus continues to be a popular militarized networking solution.

Connector Types :

There are several types of connectors used for such a bus and at the coupler stubs, the most common of which is the concentric twinax connector. These connectors typically have three bayonet coupling slots (plugs) or lugs (jacks) known as TRB type, which have the same envelope size as a coaxial BNC connector. The center contact is high (positive) connected to the twinax blue wire and the cylindrical contact is low (negative) connected to the twinax white wire. The outer body of the connector is the overall shielding.

DRAWING LIST		
No	Description	Material
①	Contact body	Gold plated Brass
②	Insulator	Teflon
③	Contact pin	30 μ" Gold plated Beryllium Copper
④	Insulator	Teflon
⑤	Insulator	Teflon
⑥	Body	Nickle plated Brass
⑦	Lock ring	Nickle plated Brass

Since the MIL-STD-1553B does not specify the type of connector to use in data bus applications, the connectors must be compatible with the cable required by the specification which are listed below.

MIL-STD-1553B Data Bus Requirements	
Communications Line	
Cable Type	Two-conductor twisted pair
Capacitance	30 pF/ft. max
Twist	4 per ft. min
Characteristic Ω (Z0)	70 to 85 ohms @ 1 MHz
Attenuation	1.5 dB/100 ft. @ 1 MHz max
Shielding	75% coverage min.
Stub Voltage	1.0V to 14.0 minimum signal voltage (transformer coupled) 1.4V to 20.0V minimum signal voltage (direct coupled)

Specific module for N coaxial contacts

The N connector was designed initially in the 1940s by Paul Neill for the US Navy. Later on it became standardized per IEC 60169-16. N connectors can be found in many RF applications in all markets. The N type connectors with screw coupling are fully interchangeable with N connectors made to the MIL-C-39012 specification. Designed for use in all systems where very good R.F. and mechanical performances are critical, whether it be at low or high frequencies.

Technical data

N Coaxial connector - Electrical specifications

Impedance	50 Ω nominal
Frequency	0–11 GHz / 18 GHz with rigid cables
Voltage Rating	1500 Volts peak

Specific module for TNC coaxial contacts

The TNC connector was designed as a threaded version of the BNC to improve RF performance stability at higher frequencies from DC up to 11 GHz. The threaded coupling mechanism improves control over the interface dimensions and allows them to be used under a higher environmental load than BNC, especially under a high vibration load. It is standardized according to IEC 60169-17.

Electrical data	Requirements
Impedance	50Ω
Frequency range	DC... 11 GHz
Dielectric withstanding voltage (at sea level)	1,5kV rms, 50 Hz (depending on cable)
Working voltage (at sea level) unmated	500 V rms, 50 Hz (depending on cable)
insulation resistance	≥ 5.103 MΩ
Contact resistance	
Center contact	≤ 1,5 mΩ
Outer contact	≤ 1mΩ
RF-leakage (between 2 and 3 GHz)	≥ 60 dB

MODULE-F connector feedthroughs

Designed as complementary to the ERVAC® product range, the hermetic feedthroughs of the MODULE-F range are dedicated to all applications using heavy and / or shielded cables. These modules are distinguished from ERVAC® modules by 4 fixing points instead of 2 and located on the air side.

MODULE-F connector feedthroughs are existing in one single size. These modules are characterized by their extreme ruggedness and versatility.

The design of the MODULE-F allows the integration of all the available connectors integrated into the ERVAC range.

- D-Sub normal density
- D-Sub high density
- Mixed layout D-Sub
- Micro-D
- ECSS-E50-12A Spacewire
- Thermocouples
- BNC, BNO, TNC, SHV, MHV

Standard flange configurations			
Flange type	Air side	Vacuum side	Cutout number
ISO K DN100			1
ISO K DN160			4
ISO K DN200			9
ISO K DN250			14
ISO K DN320			16

The products of the MODULE-F range are totally removable and reversible.

MODULE-F - Standard dimensions

Dimension A is depending on connector type

Note : The **D-Sub high density 104 contacts** is only available with this type of module to insure an improved mechanical strength during unmating and with large and heavy harnesses.

MODULE-F - Mounting process

The products of the MODULE-F range are totally removable and reversible.

- 1 - Insert the 4 screws on the module from the air to the vacuum side
- 2 - Properly clean the mounting flange with iso-propyl alcohol
- 3 - Properly clean the flat viton gasket with iso-propyl alcohol
- 4 - Place the flat viton gasket in the seal groove of the module
- 5 - Place the MODULE-F against the vacuum flange from the air side
- 6 - Tighten the 4 screws on the air side by respecting the tightening torque (see below)

All surfaces should be cleaned before mounting. After first vacuum drop down, screws may be tightened again.

Recommended surface roughness < Ra 0,8 - Tightening torque : 1,2 N.m

Modules may be delivered as spare parts or fully assembled and tested on flange.

Leakrate : < 1.10⁻⁸ mbar.l/s - Temperature Range : -40°C / +80°C

*** TT01 = thermocouples in line - TT02 = pairs

Plug In - know how Machining

We, at PLUG IN, are very much concerned by the quality of even the smallest spare component used into our hermetic feedthroughs or assemblies.

Our components are machined from the very best quality of materials by high skilled workers using the latest up-to-date numerical controlled grinders, lathes and screw machines. For instance the body of our feedthroughs are made from aeronautic grade aluminium alloys and the vacuum flanges, female screwlocks or threaded inserts (helicoil) are made of stainless steel.

During and after machining, all those and careful inspection and then optimal adhesion of our

components are going through a very tight are ultrasonic cleaned to insure an sealing epoxy compound.

The connectors are most professional sources items (space grade upon plating of the contacts. It durability.

always supplied by the selected as military grade request) with hard gold guaranties reliability and

We are proud to say that many of our parts delivered almost 20 years ago are still in use !

Plug In - know how Assembly and Integration

Since the very first day PLUG IN is committed to deliver the very best hermetic feedthroughs because the research facilities as well as space testing laboratories simply need them.

Our research, which is based on the analysis of technical processes in our production activities at the artisanal scale, favors approaches of know-how and techniques based on the accumulation of knowledge and practical experience in the manufacture of our hermetic products.

They tend to respond to two types of objectives:

- 1 - Deepen the knowledge and transmission of knowledge and know-how in our production activities
- 2 - Set up, with the concerned employees, the processes to highlight and transmit the know-how and techniques to future employees

Then each step of the assembly involves dedicated toolings used by high skilled employees.

Even not using white clean rooms, all assembly and integration is done only into three « grey » clean rooms.

A special care has been given to the light, safety and comfort of our colleagues with a strong focus on both the maintenance and replacement of toolings to insure Precision, Repeatability and then Quality.

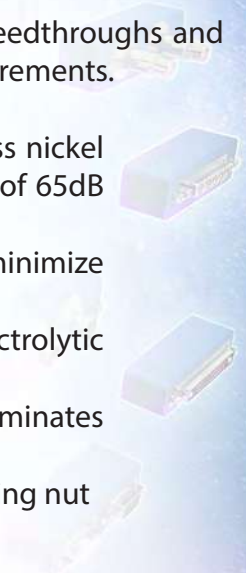

MODUL-R hermetic feedthrough range for MIL-DTL-38999 connectors

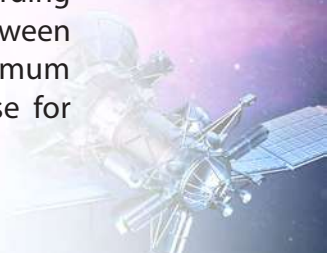

The connectors used by the United States Department of Defense were originally developed in the 1930s for aeronautical and tactical service applications. The "AN" (Army-Navy) types have set the standard for modern military circular connectors. These connectors, and their evolutionary derivatives, are often called Military Standard connectors, MIL-STD or (informally) "MIL-SPEC" or sometimes "MS". They are now used in space, aerospace, industrial, marine and even automotive applications. MIL-DTL-38999 describes four series of miniature, high density, bayonet, threaded, or breech coupling, circular, environment resistant, electrical connectors using removable crimp or fixed solder contacts

With the MODUL-R range, Plug In offers an extensive array of hermetic connector feedthroughs and the ability to deliver standard or custom designed solutions to meet the highest requirements.

-  **EMI Shielding** - solid metal to metal coupling, grounding fingers, electroless nickel plating, and thicker wall sections provide superior EMI shielding capability of 65dB minimum at 10 GHz.
-  **Contact Protection** - recessed pins in this 100% scoop-proof connector minimize potential contact damage.
-  **Moisture Resistance** - improved interfacial seal design helps prevent electrolytic erosion of contacts.
-  **Lockwiring Eliminated** - unique, self-locking, quick coupling connector eliminates lockwiring.
-  **Quick Coupling** - completely mates and self-locks in a 360° turn of the coupling nut

Environmental and electrical data

-  **Durability :**
Connector halves shall be mated and unmated 250 times for serie II with ground fingers and 500 times for series I and III at a rate not exceeding 300 cycles per hour.
-  **Insulation resistance :**
An insulation resistance test shall be performed on unmated connectors according MIL-STD-202, method 302, test condition B. Measurement shall be made between three pairs of adjacent contacts and the shell. Failure to meet the minimum requirement of 50 000 megohms for classes E, P, F, R and T shall be cause for rejection.

18 Shell sizes from 1 to 79 contacts
5 contact sizes from 22 to 8

Hermetic feedthrough and equipped flanges test equipment

The knowledge necessary for the study, the engineering, the design, the production and finally the test of the finished product are not externalizable in our field of activity. Testing is unavoidable and has always been one of the most important issue after manufacturing our modular hermetic feedthroughs. It is the major criterion so that products can be delivered to the customer.

Every single feedthrough or multiple feedthroughs already mounted on flanges, are submitted to a test by skilled testers on our flexible leakrate test bench. The various elements constituting the test bench are periodically calibrated by an external service provider to ensure the accuracy of the measures taken.

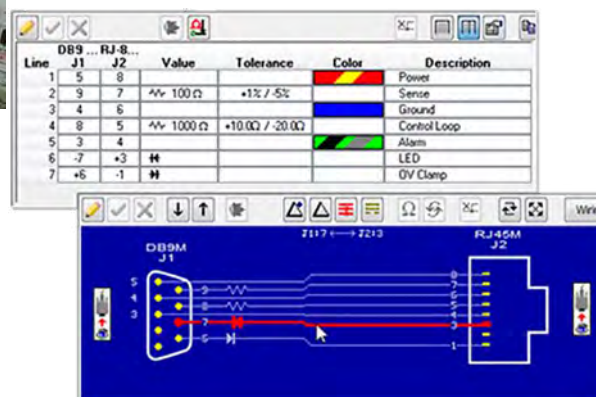

At Plug In we have all the test interfaces that allow us to test our own modular hermetic feedthrough production, but also to test pre-mounted flange assemblies with a nominal diameter of up to 800 mm.

With our cable testers and harness testers, find defective or miswired cables instantly before they damage equipment or waste valuable technician time. CableEye cable testers and harness testers have a unique, patented graphic wiring display to visually pinpoint problems when wiring errors are detected, and offer one-second pass/fail testing for production environments. Quickly locate intermittent connections and identify their position in the cable. With our Model M3U tester, set two resistance thresholds, one for good connections down to 0.3 ohms, and one for isolation up to 10 Megohms. Measure embedded resistors and resistor networks, check the orientation of diodes, and measure diode forward voltage.

The screen image to the right illustrates how the software shows diodes and resistors in wiring schematics. Model M3U use a USB interface to provide high speed scanning for intermittent connections.

Hermetic feedthrough test equipment and storage

Quickly locate intermittent connections and identify their position in the cable. We can expand CableEye to over 2000 test points for large cables and wiring harnesses, and measure cables of up to 4000 feet in length.

Our product concept allows the production of any type of hermetic feedthrough with any type of connector available on the market. The main advantage of this electrical test equipment lies in the fact that, just like us, the manufacturer can produce any type of test board configuration based on any type of connector.

The ability to realize almost any hermetic feedthrough from any type of connector requires optimal inventory management to ensure customers respectful deadlines of their test planing. It is easy to imagine the level of component stock that we must have within the company to respond positively to this expectation.

With several ten thousands of components in stock we have invested in a rotating automated storage unit that allows:

- Maximum capacity on minimum area
- Protection of references ...
- Speed of access
- Location Management
- Logistics performance

Thus we are able to ensure this responsiveness and respond as soon as possible to calls for tenders and production of products.

Information sources within this Handbook

The standards that define connectors used with our feedthroughs are constantly evolving due to the extremely rapid evolution of technologies. We thank the literature sources cited in this manual for making available to the public technical information on their know-how.
